Research Interests

Si Liu's research lies at the intersection of **formal methods**, **databases**, and **distributed systems**, with a strong focus on **leveraging formal verification techniques to build reliable, secure, and performant systems**. In recent years, he has worked on verifying and validating both the *designs and deployments* of databases systems and DNS, addressing not only *qualitative* (e.g., reliability and security) but also *quantitative* (e.g., availability and scalability) aspects. He is also interested in the intersection of these areas with AI: both in applying AI techniques to strengthen verification, and in developing rigorous methods for verifying AI-powered systems themselves.
